

I am writing in support fo satellite radio being able to provide traffic and weather content. The regualr radio stations have changed so much in the recent past that I hardly ever listen to any of those stations anymore. The reason is that they have been doing nothing but replaying the same set of music just about every hour or, if they area talk radio station, they spew nothing but hate. i listen to WSB Radio in Atlanta only for 2 or 3 hours each week day when Clark Howard is on as the remeainder of the day is filled with nothing but negativity. The "regular" radio stations are allowed to push anything they want to at you and now they wish to limit what satellite radio can air. Please support our right to get traffic and weather inforamtion over satelite radio.

Thanks for listening.
